**DETAILED ACTION**

**Allowable Subject Matter**

1. Claims 11-12, 14 17-18 and 25-31 are allowed.
2. The following is an examiner's reason for allowance:

Regarding claims 29-31, Hulyalkar et al., (U.S 6,751,196), (hereinafter Hulyalkar) discloses a multi-hop communication system configured by a radio control station and a plurality of radio stations, wherein, one radio station included in the plurality of the radio stations comprises: control signal reception unit configured to receive a control signal, broadcast from the radio control station, for communication connection with the radio control station from a reception level measuring unit configured to measure a reception level of the control signal broadcast from the radio control station, at the one radio station; a relay controlling unit configured to receive a relay control signal to which a reception level of the control signal at an other radio station is added, the relay control signal being transmitted from a source radio station to the radio control station so as to set a communication route from the source radio station to the radio control station via at least one radio station.

The instant invention discloses an information signal transmission/reception unit configured to relay an information signal, which is different from the control signal, to an other radio station according to the communication route in which the relay control signal is relayed, wherein when the reception level added to the relay control signal is smaller than the reception level at the one radio station, the relay controlling unit adds

Art Unit: 2617

the reception level at the one radio station to the received relay control signal, and relays the relay control signal, to which the reception level at the one radio station is added, to other neighboring radio stations; a direct radio station which can transmit the information signal to the radio control station directly, among the plurality of the radio stations, transmits a response relay control signal notifying the communication route in which the relay control signal is relayed, in response to receiving the relay control signal; and transmission the source radio station, which is a source of the information signal, transmits the information signal according to the route notified by the response relay control signal.

The above features in combination with all the cited limitations of claims 29-31 are neither taught, suggested nor made obvious by Hulyalkar.

3. Claims 11, 14, 17-18 and 25-28 are allowable based on their dependency on claim 30.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submission should be clearly labeled "Comment on Statement of Reasons for Allowance"
